

Cold Weather CrownCoat and ChimneySaver **A Powerful Combination**

Chimneys are highly exposed to the elements and, if left unprotected, are susceptible to deterioration. A complete chimney protection program should include repairing the crown with Cold Weather CrownCoat, as well as waterproofing the entire chimney with ChimneySaver Water Repellent. All flue tiles should have a chimney cap to further prevent water penetration. This combination is your best defense against major reconstruction.

- Can Be Applied Below Freezing
- 10 Year Warranty
- Permanently Flexible
- Natural Concrete/Mortar Appearance
- Environmentally Friendly

Cold Weather **CrownCoat**

10 YEAR LIMITED WARRANTY

SaverSystems warrants that Cold Weather CrownCoat, when used to coat or repair masonry chimney crowns, will remain intact and in place for 10 years from the date of application when properly applied by a professional contractor to a residential chimney crown according to label instructions. This warranty does not cover spalling, abrading, faulty construction and/or other defects which might erode coated surfaces.

If Cold Weather CrownCoat fails to perform as specified, SaverSystems will furnish, as sole remedy, enough product to correct the condition. This warranty does not include labor or cost of labor for the application of Cold Weather CrownCoat. SaverSystems shall not be liable for incidental or consequential damages resulting from any breach of this warranty and fitness for use. Some states do not allow the exclusion of incidental or consequential damages, so the above exclusions may not apply to you. This warranty gives you specific legal rights. You may also have other rights which vary from state to state.

Cold Weather **CrownCoat**

***For All Weather Repairs To
Damaged Chimney Crowns***

Maximum Protection—Guaranteed To Last

What is a chimney crown?

A chimney crown is a masonry roof that covers the top of your chimney. It prevents water from seeping into the masonry below. Water damaged or cracked chimney crowns can lead to costly chimney repairs.

The crown solution.

Cold Weather CrownCoat is a flexible waterproof sealant that is applied over the entire chimney crown. A professionally installed Cold Weather CrownCoat application stops further water intrusion through the crown and carries a 10 year warranty.

Visible Signs Of Damage Include...

- Cracking of the crown
- Cracking of the brick
- Spalling (flaking) of brick
- Deteriorating mortar joints
- Efflorescence (white stains)

When water penetrates through cracks in your crown and freezes, it expands, deteriorating your chimney's crown and the masonry below it. Preventing water damage to your chimney will save you thousands in expensive repairs.

Putting off this repair until warmer weather means further damage to your chimney. Cold Weather CrownCoat is a tough elastomeric coating that will cure in temperatures below freezing. This allows you to stop further water damage "cold", even in the winter months.

Anatomy Of A Chimney Crown
